can't work math. It scares me to death. I was one of the unfortunate people who, as a child, was taught math using the "New Moden Math Concept". Subsequently, like most who had the misfortune of suffering the course of instruction, the basics were sort of skipped over while we all learned "Base 108", "Base Pi" Base Chevrolet", and all the other crud we'd never use in the real world. As a result I am, therefore, mathematically illiterate. I have needed one (1) course to complete my degree. I have been avoiding this course for years. Yep, it's basic college mathematics. The thought of math makes me sweat, nauseous, and causes massive amounts of burning stomach acid. I decided to take the plunge and signed up for a distant learning math class. The course required Dr. Robert Blitzers book, "Thinking Mathematically - 5th Edition". I am now on chapter 4 and am learning math! I have put away the bottles of Malox and the sweat bands. I actually understand what I am reading. This book is great! My first homework assignments have been graded far better than I had ever hoped for. It is working for me. (At least the first 4 chapters anyway) Dr. Blitzers' book utilizes every day situations as related to math. This makes it easier to understand for the non-math major. The book is loaded with examples and work problems the answers to which, are in the back of the book. You cannot just use the answers, you will have to work for them in order to learn. However, having the answers accessible makes it easy to review and find where you have errored (if at all). Although the book is pricey, it is well worth the money. The book is absolutley loaded with information, is

large, and is over 1,000 pages in length. It is well written and if I can understand it, anyone can.
