In my reading of Steven Krantz's "Mathematical Apocrypha", I encounter numerous anecdotes that endorse the view that not only do mathematicians tend to be eccentric, but they are often very funny -- sometimes intentionally so, and sometimes not. As something of an amateur mathematician-mathematical hobbyist, I find Krantz's book a very good read -- well worth buying. My guess is that many non-mathematicians could also find in the book many stories about mathematicians and their numerous quirks that could provide for humorous storytelling and joking. As an enthusiast of mathematical ideas and those who generate them, I find "Mathematical Apocrypha" to be the best source of mathematical anecdotes I've yet been blessed with encountering.

I thought this book would be about the non-mathematical lives of famous mathematicians, and I was not proven wrong. The problem is that it is a compilation of one-paragraph anecdotes of many

mathematicians' lives, which makes for good coffee table reading and not bedtime reading. There is very little substance to any of the lifestyles of any of the characters. The accounts themselves relate to the famous and not-so-famous, but many of them are questionable as to whether they actually deserve to be in this book as they are many times simple accounts of a person's daily life - chronicling the events that happen to many of us on a daily basis. In summary the stories are too brief and there are other (better) factual books on the real lives and histories behind mathematics and mathematicians.

Don't expect all the stories to be funny. Otherwise a good time pass and shows some insights into the mathematical minds.
