Treating Complex Trauma In Adolescents And Young Adults

Synopsis

Treating Complex Trauma in Adolescents and Young Adults is the first empirically-validated, multi-component manual to guide practitioners and students in the treatment of multi-traumatized adolescents and young adults. Best-selling author, John Briere, and renowned clinician, Cheryl Lanktree, outline a hands-on, culturally-sensitive approach to the most challenging of young clients: those suffering from complex trauma histories, multiple symptoms, and, in many cases, involvement in a range of problematic behaviors. This model, Integrated Treatment of Complex Trauma for Adolescents (ITCT-A), integrates a series of approaches and techniques, which are adapted according to the youth's specific symptoms, culture, and age. Components include relationship-building, psychoeducation, affect regulation training, trigger identification, cognitive processing, titrated emotional processing, mindfulness training, collateral treatments with parents and families, group therapy, and system-level advocacy.

Customer Reviews

I *believe* that this book would be a very worthy addition to any trauma clinician's library. However,

unfortunately I am not a clinician myself so I cannot assess the quality of the material with regards to clinical practice, how it incorporates theoretical frameworks, etc. "Then why are you writing this review?" Well, for one I think the scholarship probably speaks for itself. But the real reason is that I went and read the sample thinking that this was a book for the patient to read, and I felt like since so little has been said about it thus far I might as well introduce it a little and throw in my two cents as a young adult CT patient.-Why did they write this book?"Unfortunately, although complex trauma and its effects are common, there are few empirically informed treatments specifically developed for multiply traumatized children or adolescents. This is partially due to the challenging nature of the problem - the range of these impacts often requires a multimodal, multicomponent treatment strategy. Treatment approaches that are limited to a single modality (e.g., exposure therapy, cognitive therapy, or psychiatric medication) can sometimes be insufficient - especially if the intervention approach is not adapted to the specific experiences, psychological needs, and cultural matrix of the affected youth." This book is an attempt to outline such a multi-modal, integrative approach (ITCT-A) based on the latest experimental findings.-What's in it?
