Customer Reviews

This is a nice reference guide for any person interested in the Medical field. I plan on taking a Medical Terminology and Coding this year. I read one of the reviews and decided to purchase it. It's well made, very detailed and will last a lifetime! Plus, I enjoy the color coated pictures...

I just wish I had ordered these before taking my Medical Assisting Course. They are perfect for quick references and because they are laminated they will last and can be used at the place of employment. I acquired them to assist me in preparing for my certification test that is coming up pretty quick. I am very pleased with the product.

Love these..I am buying all in the series, faster reference than online searching, more effective in rapid memorization due to graphics.

I bought this while I was in massage school for some extra help and it is perfect to fit in binders for a quick reference. The only con is that the writing is so very small that it can be easy to miss something. It does go into a lot of detail for such a small studyguide :)

I ordered this to help my daughter with her anatomy and physiology class at college. She loves it. It has great information and helps her study for exams. I definitely encourage anyone that is taking this course, or a similar one, to order this study aid. I purchased it with several other quickstudy guides and have reviewed them together with this same review due to it applying to all of them. The quickstudy guides are all great and are a must for busy college or high school students.

wife uses these for nursing school. Excellent study guides. She is VERY happy with them.

I am taking a Clinical Foundations course and these quick study guides are a must have. They are accurate, detailed, and (with the pre-punched holes) fit nicely in a binder. The lamination ensures that they will last a long time. I am quite pleased.

I bought this as a study aid for my Anatomy and Physiology course. It's great to have this skeletal breakdown in one compact, sturdy, laminated page. I've bought quite a few of these for different systems and love to have them in my arsenal of study materials for Biology and A&P. Great price and does what I need it to do.
