The Tunguska Mystery (Astronomers' Universe)

Synopsis

The summer of 1908 witnessed the arrival of an unknown space body and an explosion over the Tunguska forest in Central Siberia that could have flattened any major city on Earth. Most people think that the Tunguska event was explained long ago by scientists who study meteorites - that it was either a stony meteorite or the icy core of a comet. But these assumptions are not so tenable as their supporters would like to think. The Tunguska event remains an enigma in its second century of existence as perplexing as it has been throughout the past century. And what Russian scientists have discovered in recent decades is both astounding and reliable, and will cause some eyebrows to be raised. The Tunguska Mystery is the first truly comprehensive and popular exposition of this century-long enigma written specially for western readers. It is objective and pays attention to both conventional and unconventional theories of the Tunguska space body's origin. Also, this is the only book written in the English language on Tunguska studies in the former Soviet Union and the new independent states that is entirely based on firsthand accounts of serious researchers directly engaged in these studies. The book's language is simple, The Tunguska Mystery is meant not only for specialists, but first of all for any reader who is interested in the fascinating mysteries of the world we live in. As a reader noted on .com, the book is "very well written. The illustrations and photographs help the reader to understand the great importance of this study. I found this book to be a fine addition to anyone's library. Who does not enjoy a good mystery... a true scientific mystery which may help us someday to protect our Earth from future Tunguska events. I wish to add that it was very enjoyable from beginning to end, with a touch of humor and many interesting facts!"

Book Information

Series: Astronomers' Universe

Hardcover: 318 pages

Publisher: Copernicus; 2009 edition (August 31, 2009)

Language: English

ISBN-10: 0387765735

ISBN-13: 978-0387765730

Product Dimensions: 6.3 x 0.9 x 9.3 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Average Customer Review: 4.9 out of 5 stars See all reviews (27 customer reviews)

Customer Reviews

On June 30, 1908, on a sunny Siberian morning at 00 H 14 M GMT (7:14 am local time) something exploded in the skies over the Podkamennaya (Lower Stony) Tunguska River in what is now Krasnoyarsk Krai of Russia. The blast blew out windows 200 km away and was heard more than 800 km from the site. The seismic wave was recorded as far away as Germany and the atmospheric pressure wave was measured on barographs in London. The nearest eyewitnesses (30 km to the south-southeast) had their shelter blown away, their local area set afire, and reported a second sun in the sky. Approximately 2100 sq km of forest was radially flattened and then burned. At the epicentre, trees remained standing but were stripped of branches - burnt telegraph poles. The blast occurred at some 6 to 8 km altitude. There is no impact crater. I became fascinated by the Tunguska Event nearly half a century ago, reading about it in 'Boy's Life' or some such and I am not alone, as it has become an enduring Global mystery, familiar to hundreds of millions, and a staple of popular western culture seeking the undefinable. A true X-File. This morning, (26 October 2009) a Google search on 'Tunguska event' turned up over 59,000 hits. Not surprising for an occurrence that has been the focus of intense curiosity, speculation and (as Dr. Rubtsov has detailed) an extraordinary investigative effort by Soviet and Russian scientists over the last hundred years. Dr. Rubtsov's book is an encyclopedic compilation and a well written precis of the scientific records of that marvellous research. From the 1921 Kulik expedition searching for evidence of a meteorite impact (which was not found) to the Centenary conferences held in 2008 to discuss the event (there were more than half a dozen of them), Dr.
