# Primary Tooth Development In Infancy: A Text And Atlas

## Synopsis

Primary Tooth Development in Infancy: A Text and Atlas describes the initial phase of human dentition. It includes more than 1,500 photographs of fetal and infant teeth up to the age of one year. The book presents each step in the developmental phases in photographs accompanied by concise explanatory text. The teeth are photographed from six different aspects: labial, lingual, mesial, distal, incisal, and from the root direction and includes CT images in some cases. Topics covered include morphology and development of primary dentition, discrimination criteria for human dentitions, forensic importance of direct and indirect measuring techniques, dental identification and age estimation from teeth, achieving dental evidence from oral autopsy, and age estimation formulae. The book also discusses the neonatal line concept of intrauterine life accompanied by corresponding scanning electron microscope photographs. A supplementary software program for age estimation from dental measurements can also be used in conjunction with the material in this text. Meticulously prepared by a team of experts, this atlas is a valuable tool for odontologists, pediatricians, pedodontists, forensic scientists, and dental anthropologists.
